

NEWBOX

Euro-standard container NB with access opening

Newbox Euro-standard containers with an access opening enable the contents to be added or removed easily via the opening in the narrow or long side – even in the stack. The design means the organisation and storage of the parts is always visible.

Applications

Newbox containers with an access opening offer a practical solution for the storage of tools and small parts at set-up locations and for work preparation.

Special types

All non-stock items are marked thus and available on request only.
