

AUTOMATIC BLACK

The dimensionally stable Automatic Black together with stackable containers (Blackline Futura) is ideal for automated or manual distribution in the ESD-protected non-food sector. However, the trays and tablets also perform well in semi and fully automated operation and protect your conductive electronic components. The design takes into account both the requirements of modern logistics and the opportunities that today's plastics technology has to offer.

Available sizes

Blackline Futura (closed)		
Basic dimensions (LxW in mm)	External height (mm)	
400x300	120	175
